DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 4-5 and 22-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's admitted prior art of figure 3[AAPA] in view of Yue [US 6,717,502].

AAPA discloses a device comprising:

- a first circuit including an FR filter [202] and an antenna [102];
- a second circuit including a low noise amplifier [206]; and
- an impedance matching circuit [208] coupled between the first circuit and the second circuit, wherein the impedance matching circuit includes first and second in-silicon spiral inductors [302].

AAPA discloses the instant claimed invention except for the specific of the first and second in-silicon spiral inductors.

Yue discloses a multi-layered inductive device structure [figures 4b1-4c] comprising two interleaved inductor coils [408, 410] formed on a silicon substrate having differential signal flow in the same direction [figure 4b1, 4c].

It would have been obvious to one having ordinary skill in the art at the time the invention was made to use the inductive device of Yue in AAPA for the purpose of providing good magnetic coupling as well as symmetrical parasitic characteristics.

Art Unit: 2832

Regarding claim 2, Yue discloses a portion of the first inductor and a first portion of the second inductor formed on a first metal layer [figure 4b2a].

Regarding claims 4-6, Yue discloses a second portion of the first inductor and a second portion of the second inductor formed on a second metal layer and a third metal layer [figures 4b3 and 4b2b].

Response to Arguments

Applicant's arguments with respect to claims , 4-5 and 22-25 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
